## Fabricated Y-Strainer

### APPLICATIONS

Steam, water, oil or gas where protection from foreign matter in a pipeline is required.

### CONSTRUCTION

The Keckley Style FSA (carbon steel) & FSSA (stainless steel) fabricated Y-type strainers are normally supplied with a bolted (slip hinge) cover and are available with either flanged or butt weld connections. Flanges are raised face and drilled in accordance with ASME B16.5 and come standard with back-faced boltholes.

Special dimensions are available. For additional pressure classes, flanges, and materials of construction (Low Carbon Steel, Alloy 20, Hastelloy C276, Monel, and Duplex Stainless Steel) visit [www.keckley.com](http://www.keckley.com).

### FEATURES

The Keckley Style FSA and FSSA strainer screens are piloted through the use of machined grooves in both the body and cover to ensure proper alignment. The cover gasket is designed for specific pressure and temperature ratings. Keckley Style FSA and FSSA strainers have studs and nuts and are furnished with a blow down plug as standard.

Blind covers are available upon request.

### SCREENS

Standard screens are perforated 304 stainless steel and are spot welded for maximum strength. Different size perforations and meshes are available in stainless steel, monel, and brass to meet specific media requirements. If media is not indicated, 1/8" perforated 304 stainless steel screens will be supplied.

### SELF CLEANING

Self cleaning of the Style FSA and FSSA strainers are accomplished by opening the valve or drain plug connected to the blow off port. **Warning:** See Maintenance Instructions on page S6 of the Strainer Information Section for additional precautions and detailed information on servicing the strainer.

## Fabricated Basket Strainer

### APPLICATIONS

Steam, water, oil or gas where protection from foreign matter in a pipeline is required.

### CONSTRUCTION

The Keckley Style FB family of fabricated basket strainers are available in carbon steel or stainless steel. Either flanged or butt weld connections are furnished. These basket strainers are available with a Quick Open Cover (FB-Q), Bolted Slip Hinge Cover (FB-H), or Integral Swing Arm Davit Assembly (Style FB-D). Flanges are raised face and drilled in accordance with ASME B16.5 and come standard with back-faced boltholes.

Special dimensions are available. For additional pressure classes, flanges, and materials of construction (Low Carbon Steel, Alloy 20, Hastelloy C276, Monel, and Duplex Stainless Steel) visit [www.keckley.com](http://www.keckley.com).

### BASKETS

Baskets are perforated 304 stainless steel and are spot welded for maximum strength. Different size perforations and meshes are available in stainless steel, monel, and brass to meet specific media requirements. If media is not indicated, 1/8" perforated 304 stainless steel baskets will be supplied.

### CLEANING

Cleaning of the Style FB strainer is accomplished by removing the cover and pulling out the basket. **Warning:** See Maintenance Instructions on page S6 of the Strainer Information Section for additional precautions and detailed information on servicing the strainer.

## Fabricated Tee Strainer

### APPLICATIONS

Steam, water, oil or gas where protection from foreign matter in a pipeline is required.

### CONSTRUCTION

The Keckley Style T "Tee" strainers are supplied with weld neck flange or butt weld connections. Ring Type Joint connections are also available; for ring type joint specify ring number and style.

The Style T & TQ strainers are suitable for either horizontal or vertical (downward flow) piping.

Special dimensions are available. For additional pressure classes, flanges, and materials of construction (Low Carbon Steel, Alloy 20, Hastelloy C276, Monel, and Duplex Stainless Steel) visit [www.keckley.com](http://www.keckley.com).

### BASKETS

Standard baskets are 1/8" perforated 304 stainless steel (approximately 6 mesh) and are spot welded for maximum strength. Different size perforations and meshes are available in stainless steel, monel, and brass to meet specific media requirements.

### SELF CLEANING

Self cleaning of the Style T & TQ strainers is accomplished (depending upon orientation) by either opening the valve or drain plug connected to the blow off port or removing the cover and pulling out the basket. **Warning:** See Maintenance Instructions on page S6 of the Strainer Information Section for additional precautions and detailed information on servicing the strainer.

## Fabricated Temporary Cone, Basket, & Plate Strainers

### APPLICATIONS

Steam, water, oil or gas where protection from foreign matter in a pipeline is required. These strainers are installed between flanges for inexpensive protection of mechanical equipment.

### CONSTRUCTION

The Keckley Style TC, TB & TP strainers are available in carbon steel, stainless steel, and other alloys.

Screens are available perforated, mesh, or mesh lined to meet specific media requirements.

### STANDARD SCREENS

The Keckley Style TC, TB & TP strainers are normally supplied with 1/8" diameter holes on 3/16" centers.

### WHEN ORDERING SPECIFY

- Pipe Size
- Style
- Pressure Rating
- Perforation or Mesh Size
  - If mesh lined, specify direction of flow.
- Material of Construction

## Style FLB

Fabricated Line Blinds

Carbon Steel & Stainless Steel

150 lb. to 2500 lb.

Flanged or Butt Weld

## Quick Acting Line Blinds

### APPLICATIONS

Keckley's Quick Acting Line Blinds are designed for applications where positive, visual indication of line closure/opening are required.

### FEATURES

The position of the spectacle plate indicates whether the line is open or closed, reducing or eliminating the possibility of costly or dangerous situations. Keckley Quick Acting Line Blinds utilize O-ring seals to achieve the most effective shutoff. Our standard O-ring is located in the dovetail groove in both faces of the spectacle plate.

Two stainless steel guide pins are located in the face of the body flange to ensure accurate alignment of the spectacle plate with the bore.

With the Keckley Quick Acting Line Blind, one operator can change a 6" Line Blind in five minutes without the need for special tools as compared to a typical 6" spectacle blind, which takes two maintenance men approximately 1-12 hours to change over.

### CONSTRUCTION

The standard model has a carbon steel body and zinc plated carbon steel trim. Stainless steel and other alloys are also available to meet your specific requirements. All units are available flanged or butt weld.

## Style FBO

Fabricated Basket - Offset

Bolted Cover

Carbon Steel & Stainless Steel

150 lb. Flanged & Butt Weld

300 lb. Flanged & Butt Weld

600 lb. Flanged & Butt Weld

## Flanged Offset Basket Strainer

### APPLICATIONS

Water, oil or gas where protection from foreign matter in a pipeline is required.

### CONSTRUCTION

These strainers can be fabricated to any specifications. The offset flanges allow easy connection for a wide variety of pump installations. These strainers are available in carbon steel, 304 stainless steel, and 316 stainless steel.

### FEATURES

These strainers have been designed to answer the specific need for an extremely large capacity strainer requiring minimum down time for cleaning and are ideal for very fine straining. The basket and seat are designed to eliminate sediment by-pass for particle sizes as small as five micron. The low outlet design lends itself to pump installations where the suction is located close to the floor.

### BASKETS

Standard baskets are perforated 304 stainless steel. All baskets are spot welded for maximum strength. Different size perforations and meshes are available in stainless steel, monel, and brass to meet specific media requirements. If media is not indicated, 1/8" perforated 304 stainless steel baskets will be supplied.

## Optional Features

Differential Pressure Gauge

Integral Davit Swing Arm

Special Drains

### SPECIAL OPTIONS ON FABRICATED STRAINERS

- Differential Pressure Gauges
- Custom Nozzle Positions
- Custom Blowdown Connections
- Custom Venting
- Custom Basket Configurations
- Special Coatings and Galvanizing
- Custom Floor Stands and Mounting Hardware
- Oversized Bodies

### DATA REQUIRED WHEN ORDERING

- End Connections (Flange or Butt Weld)
- If Offset, Specify Dimensions
- Body Rating
- Design Pressure and Temperature
- Capacity Requirements
- Screen Material and Perforation/Mesh Size

# PRESSURE DROP CHART

## Fabricated Y-Type Strainers

This pressure drop chart is based on the flow of clean water through the Keckley fabricated Y-Type strainers with a 1/8" perforated screen.

### TO USE CHARTS:

Find your desired rate of flow (GPM) on the left hand side of the chart. Follow its corresponding horizontal line to the point where it intersects the diagonal line indicating the strainer pipe size. From this point of intersection, follow the vertical line down to the bottom of the chart to determine the approximate pressure drop.

### CORRECTION FACTORS:

For finer mesh baskets that are backed with a perforated sheet, multiply the pressure drops shown at right by the following:

- 40 mesh      x 1.2
- 60 mesh      x 1.4
- 80 mesh      x 1.6
- 100 mesh     x 1.7

# PRESSURE DROP CHART

## Fabricated Basket Strainers

This pressure drop chart is based on the flow of clean water through the Keckley fabricated basket strainers with a 1/8" perforated basket.

### TO USE CHARTS:

Find your desired rate of flow (GPM) on the left hand side of the chart. Follow its corresponding horizontal line to the point where it intersects the diagonal line indicating the strainer pipe size. From this point of intersection, follow the vertical line down to the bottom of the chart to determine the approximate pressure drop.

### CORRECTION FACTORS:

For finer mesh baskets that are backed with a perforated sheet, multiply the pressure drops shown at right by the following:

- 40 mesh x 1.2
- 60 mesh x 1.4
- 80 mesh x 1.6
- 100 mesh x 1.7

# PRESSURE DROP CHART

## Fabricated T-Type Strainers

This pressure drop chart is based on the flow of clean water through the Keckley Fabricated T-Type strainers with 1/8" perforations (approximately 6 mesh).

### TO USE CHARTS:

Find your desired rate of flow (GPM) on the left hand side of the chart. Follow its corresponding horizontal line to the point where it intersects the diagonal line indicating the strainer pipe size. From this point of intersection, follow the vertical line down to the bottom of the chart to determine the approximate pressure drop.

### CORRECTION FACTORS:

For finer mesh baskets that are backed with a perforated sheet, multiply the pressure drops shown at right by the following:

- 40 mesh      x 1.2
- 60 mesh      x 1.4
- 80 mesh      x 1.6
- 100 mesh     x 1.7

# PRESSURE DROP CHART

## Fabricated Temporary Cone/Basket Strainers

This pressure drop chart is based on the flow of clean water through the Keckley strainer styles listed above with screen perforations ranging from 3/64" through 1/8".

### TO USE CHARTS:

Find your desired rate of flow (GPM) on the left hand side of the chart. Follow its corresponding horizontal line to the point where it intersects the diagonal line indicating the strainer pipe size. From this point of intersection, follow the vertical line down to the bottom of the chart to determine the approximate pressure drop.

### CORRECTION FACTORS:

For finer mesh baskets that are backed with a perforated sheet, multiply the pressure drops shown at right by the following:

- 40 mesh      x 1.2
- 60 mesh      x 1.4
- 80 mesh      x 1.6
- 100 mesh     x 1.7

# PRESSURE DROP CHART

## Fabricated Temporary Cone/Basket Strainers
