Are you at the end of your tether?

Tretrice temperature, pressure, and control products will help you maintain your temperament *and* keep your industrial processes at peak performance!

Tie-in to modern product innovations now:

Need help with your application? We have extensive knowledge of each Tretrice product, and can help guide you to the right one for your application. **Call us today!** Our engineers have a solution!

Temperature

Tretrice now offers a “**New and Improved**” version of its **SX9-Solar Digital Thermometer**. The SX9 “Solar Therm” now comes standard with a NEMA-4X case, making it suitable for wet applications and in areas that require spray-down. The SX9 is the ideal replacement for existing mercury-in-glass thermometers in environmentally conscious applications.

Industrial Pressure Transmitter

The Tretrice **220TST Pressure Transmitter** is the ideal choice for demanding industrial, test and measurement, and process control applications.

Regulators & Control Valves

The Tretrice **995 Series Pressure Regulator** is used in reducing pressure in steam, air and water systems. The 995 includes a spring-loaded diaphragm that can be externally adjusted to provide uniform outlet pressure. It features a cast-iron body and either a bronze diaphragm for steam service or Viton diaphragm for water, oil or air service. This regulator is designed for use in a variety of commercial, institutional, and industrial applications.

Pressure Gauges

The Tretrice **875LFB Brass Case Gauge** is designed for severe service applications. The one-piece forged brass case and socket is able to withstand the harshest industrial processes.

The Tretrice **575SS Field Test Gauge** offers portable inspecting and testing of pressure systems and vessels prior to start up or to trouble shoot existing applications.

M&M is Proud to Represent the Complete Line of Tretrice Products
