## 1.0 Introduction

Congratulations on purchasing the A-100N Peristaltic Metering Pump. The A-100N is designed to inject chemicals into piping systems. The pump has been tested by NSF International for use with 12 ½% Sodium Hypochlorite. This manual covers the following feed rate adjustment mechanisms:

1. **Fixed Cycle Timer** - (Models A-100NA, A-100NC, A-100NS) The fixed speed pumping mechanism is turned on and off by an electronic timer. The *total* cycle time is factory set. The *on-time* cycle is adjustable from 5% through 100% of the total cycle time. Model A-100NA has a 1 minute cycle with a 60 second adjustable on-time. Model A-100NC has a 5 second cycle with a 5 second adjustable on-time. Model A-100NS (ideal for spa and hot tub chlorination) has a 1 minute cycle with a 6 second adjustable on-time. (Custom cycles are available from the factory).
2. **Variable Speed Controller** - (Model A-100NF) The speed of the pumping mechanism is adjustable from 5% through 100%.
3. **Fixed Feed Rate** - (Model A-100NX) No adjustment control.

## 2.0 Specifications

<b>Maximum Working Pressure</b>	100 psig / 6.9 bar (most models)
<b>Maximum Fluid Temperature</b>	130° F / 54° C
<b>Ambient Temperature Range</b>	14 to 110° F / -10 to 43° C
<b>Duty Cycle</b>	Continuous
<b>Maximum Solids</b>	50% by volume
<b>Maximum Viscosity</b>	5,000 Centipoise
<b>Maximum Suction Lift</b>	up to 30 ft. water
<b>Power Requirements</b>	108/130Vac 60Hz 80 Watts, 208/250Vac 50Hz 40 Watts, 208/250Vac 60Hz 45 Watts
<b>Dimensions</b>	6-1/8" H x 10-1/8" W x 9" D
<b>Weight</b>	8 lb.

## 3.0 Features

- Peristaltic Pump Tube does not require valves.
- Self priming under maximum pressure. Cannot vapor lock.
- High outlet pressure capability of 100 psig (most models).
- High inlet suction lift capability of 30 feet.
- Patented Tube Failure Detection (TFD) system.
- Patented pump tube assembly design.
- Includes Flow Verification System (FVS) - sensor sold separately.
- Open collector (sinking 50mA max) alarm output. (30V DC max)
- Corrosion proof Valox housing.
- Tamper resistant electronic control panel cover.

## 4.0 Unpacking

Your pump package should contain the following:

- 1 - Injector pump with 2 pump tube assemblies
- 1 - suction tube strainer
- 1 - ceramic tubing weight
- 1 - 5' Length of clear PVC suction tubing
- 1 - 5' Length of opaque LLDPE discharge tubing
- 1 - Injection fitting with internal back-flow check valve
- 1 - Mounting hardware kit

## 5.0 Installation

**CAUTION: Proper eye and skin protection must be worn when installing and servicing the pump.**

*Note: All diagrams are strictly for guideline purposes only. Always consult an expert before installing the pump into specialized systems. The pump should be serviced by qualified persons only.*

### 5.1 Mounting Location

Choose an area located near the chemical supply tank, chemical injection point and electrical supply. Although the pump is designed to withstand outdoor conditions, a cool, dry, well ventilated location is recommended. Install the pump where it can be easily serviced.

- Mount the pump to a secure surface or wall using the enclosed hardware. Wall mount to a solid surface only. Mounting to drywall with anchors is not recommended.
- Mount the pump close to the injection point. Keep the outlet (discharge) tubing as short as possible. Longer tubing increases the back pressure at the pump tube.
- Your solution tank should be sturdy. Keep the tank covered to reduce fumes. Do not mount the pump directly over your tank. Chemical fumes may damage the unit. Mount the pump off to the side or at a lower level than the chemical container.
- Mounting the pump lower than the chemical container will gravity feed the chemical into the pump. This “flooded suction” installation will reduce output error due to increased suction lift. You must install a shut-off valve, pinch clamp or other means to halt the gravity feed to the pump during servicing.
- Be sure your installation does not constitute a cross connection with the

# A-100N

## INJECTOR MOUNTING

### Floor Mount

Drill .156 Dia. (5/32)  
For Self-Tap Screw  
#10 X 1" Phillips Steel  
4 Places

### Wall Mount

Drill .156 Dia. (5/32)  
For Self-Tap Screw  
#10 X 1" Phillips Steel  
2 Places

Note: For wall-mounting, drill & thread into solid wood only.

## TYPICAL INSTALLATION

Injection / Check valve with 1/4" and 1/2" male pipe threads.  
Mount in upward position to prevent trapped gasses in the injection fitting.

**FLEXFLO®**

Wall or shelf mount away from the top of the solution tank. Chemical fumes can damage the unit.

## PARTS LOCATOR DRAWING

\* Slide both top & bottom clamps to the left only far enough to open the control cover.

**5.2 Optional circuit board signal connection installation** - The pump includes three optional external signal connections:

- **FVS - FLOW VERIFICATION SENSOR INPUT**  
Accepts a pulse signal from an optional Blue-White sensor confirming that fluid is passing through the pump. Triggers and alarm output if fluid is not detected.
- **AL - ALARM OPEN COLLECTOR OUTPUT**  
The output (purple wire) sinks to DC ground when an alarm condition exists. 6-30Vdc collector voltage. 50mA dc maximum sinking current.
- **MA - MOTOR ACTIVE OPEN COLLECTOR OUTPUT**  
The output (brown wire) sinks to DC ground when the motor is de-energized. 6-30Vdc collector voltage. 50mA dc maximum sinking current.

All signal wires must be connected to the circuit board, located inside the pump enclosure, using connector plug wiring assemblies. A liquid-tight connector must be installed in the pump enclosure wall and the signal wires passed through the liquid-tight connector and secured. See pages 8 & 9 for wiring details.

1. Remove the rear enclosure panel.
2. Remove knock-out using a screwdriver.
3. Trim edge with a knife and remove sharp edges.
4. Install the provided liquid-tight connector.
5. Connect the connector plug to the circuit board.

# A-100N

## CIRCUIT BOARD SIGNAL CONNECTION

FVS - FLOW VERIFICATION  
SENSOR INPUT

AL - OPEN COLLECTOR  
ALARM OUTPUT

MA - OPEN COLLECTOR  
MOTOR ACTIVE OUTPUT

### 5.3 Input Power Connections

**WARNING: Risk of electric shock.**

Be certain to connect the pump to the proper supply voltage. Using the incorrect voltage will damage the pump and may result in injury. The voltage requirement is printed on the pump serial label.

The pump is supplied with either a ground wire conductor and a grounding type attachment plug (power cord) or a junction box for field wiring.

**POWER CORD MODELS** -To reduce the risk of electric shock, be certain that the power cord is connected only to a properly grounded, grounding type receptacle.

**JUNCTION BOX MODELS** -To reduce the risk of electric shock, be certain that a grounding conductor is connected to the green grounding conductor located in the junction box.

*Note: When in doubt regarding your electrical installation, contact a licensed electrician.*

#### MOTOR LEADWIRES

INPUT VOLTAGE	HOT LEADWIRE	NEUTRAL LEADWIRE	GROUND LEADWIRE
115VAC 60Hz	YELLOW	BLUE	GREEN
220VAC 50Hz	YELLOW	BROWN	GREEN
230VAC 60Hz	YELLOW	RED	GREEN
90VDC	(+) RED	(-) BLACK	GREEN

#### CIRCUIT BOARD SIGNAL IN/OUT CONNECTIONS

SYSTEM DESCRIPTION	WIRE COLOR CODE
FVS - FLOW VERIFICATION SENSOR INPUT Accepts a pulse signal from an optional Blue-White sensor confirming that fluid is passing through the pump. Triggers and alarm output if fluid is not detected.	<b>RED</b> (+ 20VDC) <b>BLACK</b> (-) <b>YELLOW</b> (signal)
TFD - TUBE FAILURE DETECTION SYSTEM INPUT Monitors a pair of sensors in the pumphead. Triggers an alarm output if fluid with a conductivity of greater than 500 micro-seimens is detected. Typical chemicals include chlorine, acid, caustic. The system will not detect water or silicone lubricating oil.	<b>GRAY &amp; GRAY</b>
AL - ALARM OPEN COLLECTOR OUTPUT The output (purple wire) sinks to DC ground when an alarm condition exists. 6-30Vdc collector voltage. 50mA dc maximum sinking current.	<b>PURPLE</b> (+) & <b>BLACK</b> (-)
MA - MOTOR ACTIVE OPEN COLLECTOR OUTPUT The output (brown wire) sinks to DC ground when the motor is de-energized. 6-30Vdc collector voltage. 50mA dc maximum sinking current.	<b>BROWN</b> (+) & <b>BLACK</b> (-)

**WIRING DIAGRAM - Model A-100NF**

## 5.4 How To Install the Tubing and Fittings

**CAUTION: Proper eye and skin protection must be worn when installing and servicing the pump.**

- **Inlet Tubing** - Locate the inlet fitting of the Pump Tube. Remove the tube nut. Push the clear PVC suction tubing onto the compression barb of the fitting. Use the tube nut to secure the tube. Hand tighten only.
- **Strainer** - Trim the inlet end of the suction tubing so that the strainer will rest approximately two inches from the bottom of the solution tank. This will prevent sediment from clogging the strainer. Slip the ceramic weight over the end of the suction tube. Press the strainer into the end of the tube. Secure the ceramic weight to the strainer. Drop the strainer into the solution tank.
- **Outlet Tubing** - Locate the outlet fitting of the Pump Tube. Remove the tube nut. Push the opaque outlet (discharge) tubing onto the compression barb of the fitting. Use the tube nut to secure the tube. Hand tighten only.

**Keep outlet tube as short as possible.**

- **Injection/Check Valve Fitting Installation** - The Injection/Check valve fitting is designed to install directly into either 1/4" or 1/2" female pipe threads. This fitting will require periodic cleaning, especially when injecting fluids that calcify such as sodium hypochlorite. See section 7.0. Install the Injection/Check valve directly into the piping system. To prevent trapped gasses, install the fitting in an upward direction. Use Teflon thread sealing tape on the pipe threads.

Push the opaque outlet (discharge) tubing onto the compression barb of the Injection/Check valve fitting. Use the tube nut to secure the tube. Hand tighten only.

# A-100N

## 6.0 How to Adjust The Output

**6.1 Fixed Cycle Timer Models** -The pumping mechanism is turned on and off by an electronic cycle timer. The total-time cycle is factory preset and is not user adjustable. The on-time cycle is adjustable from 5% to 100% of the total cycle time (model A-100NS timers adjust from .5 to 6 seconds with total time cycle of 60 seconds).

Example: If the total-time cycle is 60 seconds and the on-time cycle is adjusted for 25 percent, the pump will run for 15 seconds and turn off for 45 seconds (60 second total cycle). This cycle is repeated until either the power switch is turned off, the cycle time is changed or the input power is disconnected from the pump.

### To adjust the pump output -

- Slide the slide clamps to the left only far enough to open the control panel door.
- Turn the adjustment knob to the desired percentage of on-time per cycle.

**Note: When power is applied to the pump, the A-100N will either automatically begin to pump, or maintain power-off status, depending on the power switch status.**

**6.2 Variable Speed Model** -The speed of the pumping mechanism is adjustable from 5 % through 100%.

### To adjust the pump output -

- Slide the slide clamps to the left only far enough to open the control panel door.
- Turn the adjustment knob to the desired percentage of speed.

**6.3 TFD (Tube Failure Detection)** - The pump is equipped with a *Tube Failure Detection System* which is designed to stop the pump and provide an open collector (sinking) output signal in the event the pump tube should rupture and chemical enters the pump head. This patented system is capable of detecting the presence of a large number of chemicals including Sodium Hypochlorite (Chlorine), Hydrochloric (muriatic) Acid, Sodium Hydroxide, and many others. The system will not be triggered by water (rain, condensation, etc.) or silicone oil (roller and tubing lubricant).

If the system has detected chemical, the pump tube must be replaced and the **pump head and roller assembly must be thoroughly cleaned.**

**Confirm Chemical Detection** - To determine if your chemical will be detected by the system, remove the pump tube and roller assembly. Place a small amount of the chemical in the bottom of the pump head - just enough to cover the sensors. Turn on the pump. If the TFD system detects the chemical, the pump will stop after a five second confirmation period. If the TFD system does not detect the chemical, the pump will continue to run after the confirmation period. Carefully clean the chemical out of the pump head being sure to remove all traces of chemical from the sensor probes. Turn the power switch off and on to reset the pump.

**Open Collector Alarm Output** - An open collector (sinking) output signal is provided with the TFD system. (See page 6).

**6.4 (FVS) Flow Verification System** - The pump is equipped with a *Flow Verification System* which is designed to stop the pump and provide an open collector (sinking) output signal in the event the sensor does not detect chemical during pump operation. This could indicate a clogged injection fitting, empty chemical solution tank, worn pump tube, loose tubing connection, etc.

The system features an alarm delay time of 6 seconds which allows the pump to clear any gasses that may have accumulated during stopped operation. The pump will stop, and the alarm mode activated, if no pulses are received by the pump and the alarm delay time period has ended. Turn the power switch off and on to clear the alarm and restart the pump. The Flow Verification Sensor is sold as an optional accessory.

**Confirm the FVS flow range** - The Flow Verification Sensor (FVS) will only function within its operating range. Sensor model FV-100-6V has an operating range of 30-300 ml/min (1-10 oz/min). If the pump's output is less than 30 ml/min (0.5 ml/sec), the sensor will not detect chemical and a signal will not be sent to the pump.

# A-100N

SENSOR MODEL NUMBER	OPERATING FLOW RANGE (ml/min)
FV-100-6V	30-300
FV-200-6V	100-1000
FV-300-6V	200-2000
FV-400-6V	300-3000
FV-500-6V	500-5000
FV-600-6V	700-7000

**Install the FVS Flow Sensor** - The Flow Verification Sensor (FVS) should be installed on the inlet (suction) side of the pump tube. The sensor includes a PVC tubing insert, located inside the sensor’s female thread connection, that is designed to seal the sensor onto the pump tube inlet adapter. Thread the sensor onto the pump tube until the tubing insert is snug against the pump tube inlet fitting - do not over-tighten.

Connect the red/white (+), black (-), and bare (signal) wires from the sensor to the red (+), black (-), and yellow (signal) wires on the plug connector. Knock-out the liquid-tite connector mounting hole on the side of the pump enclosure and install the liquid tight connector. Route the wires through the connector and tighten the connector nut. Plug the connector onto the circuit board at the pins marked “FVS”. See page 6.

**Open Collector Alarm Output** - An open collector (sinking) output signal is provided with the FVS system. (See page 6).

## 7.0 How to Maintain the Pump

**CAUTION: Proper eye and skin protection must be worn when installing and servicing the pump.**

### 7.1 Routine Inspection and Maintenance

The pump requires very little maintenance. However, the pump and all accessories should be checked weekly. This is especially important when pumping chemicals. Inspect all components for signs of leaking, swelling, cracking, discoloration or corrosion. Replace worn or damaged components immediately.

Cracking, crazing, discoloration and the like during the first week of operation are signs of severe chemical attack. If this occurs, immediately remove the chemical from the pump. Determine which parts are being attacked and replace them with parts that have been manufactured using more suitable materials. The manufacturer does not assume responsibility for damage to the pump that has been caused by chemical attack.

### 7.2 How to Clean and Lubricate the Pump

The pump will require occasional cleaning and lubricating. The amount will depend on the severity of service.

- ☑ When changing the pump tube assembly, the pump head chamber, roller assembly and pump head cover should be wiped free of any dirt and debris.
- ☑ The pump head cover bearing may require grease periodically. Apply a small amount of grease (Aeroshell aviation grease #5 or equivalent) when necessary.
- ☑ Although not necessary, 100% silicon lubrication may be used on the roller assembly and tube assembly.
- ☑ Periodically clean the injection/check valve assembly, especially when injecting fluids that calcify such as sodium hypochlorite. These lime deposits and other build ups can clog the fitting, increase the back pressure and interfere with the check valve operation.
- ☑ Periodically clean the suction strainer.
- ☑ Periodically inspect the air vents located under the motor compartment and on the rear panel. Clean if necessary.

# A-100N

## 7.3 How to Replace the Pump Tube

The pump tube assembly will eventually break if not replaced. The tube has been designed for a minimum service life of 500 hours. However, the life of the tube is affected by many factors such as the type of chemical being pumped, the amount of back pressure, the motor RPM, temperature and others. The pump tube assembly must be inspected and replaced regularly.

**Remove the Old Pump Tube** - The pump roller assembly spins in a counter clockwise direction. The pump head inlet (suction) side is located at the bottom of the pump and the outlet (discharge) is located at the top of the pump head.

- Release any pressure that may be in the discharge tubing.
- Disconnect the suction and discharge tubes from the pump tube.
- Remove the pump head cover.
- With the pump running, pull the inlet fitting out of the pumphead. Guide the tube counter clockwise away from the rollers. Pull the outlet fitting out of the pump head.

**Install the New Pump Tube** - Be sure the pump head chamber is clean and free of any debris.

Remove and inspect the roller assembly. Be sure the rollers spin freely. If required, apply a small amount of grease to the pump head cover bearing.

- With the pump running, insert the inlet (suction) side of the Pump Tube fitting into the pump head.
- **Carefully** guide the Pump Tube into the pump head. Stretch the tube slightly and insert the outlet (discharge) fitting into the upper retaining slot in the pump head.
- Place the clear cover on the pump head and secure with three screws.
